

Cat's Claw

AN ASTOUNDING "NEW" HERB FROM THE PERUVIAN RAINFORESTS

Phillip Steinberg, certified nutritional consultant

For hundreds of years a rather remarkable plant has been revered and used by the Indian natives of the Peruvian Amazon to "cure" cancer, arthritis, gastritis, ulcers, and female hormonal imbalances.

Researchers have determined that this plant, *Uncaria tomentosa*, more commonly called "cat's claw," contains a wealth of beneficial phytochemical compounds: alkaloids, proanthocyanidins, polyphenols, triterpenes, and plant sterols. Because of these compounds, cat's claw is a powerful cellular reconstitutor, displaying significant antibacterial, antiviral, antifungal, antitumor, anti-inflammatory, and anti-oxidant properties.

According to the available research and experience of doctors working in Peru, Germany, Austria, and the United States, cat's claw may be helpful in the treatment of: cancer; arthritis; bursitis; rheumatism; all forms of herpes; allergies; asthma; systemic candidiasis; acne; diabetes; lupus; prostatitis; chronic fatigue syndrome; PMS; irregularities of the female cycle; environmental toxin poisoning; organic depression; and those infected with the HIV virus. Evidence also suggests that cat's claw may be effective in the treatment of numerous stomach and bowel disorders including.

The most exciting research has been the work of Dr. Klaus Keplinger, an Austrian scientist who has obtained two United States patents for isolating the alkaloids responsible for enhancing phagocytosis. This has resulted in the development of a pharmaceutical which is now being used in Austria and Germany to combat the progression of cancer and AIDS. Unfortunately, the pharmaceutical is not available in the US, but the herb is available both in tea and in capsule form.

Traditionally in Peru, a decoction is made by boiling the bark and/or root for about an hour and then drinking four or more cups of tea per day. When using capsules, three to six grams per day is considered therapeutic. However, as much as 20 grams per day might be used for several weeks at a time to treat very advanced stages of pathology.

Dr. Satya Ambrose, ND, the co-founder of the Oregon College of Oriental Medicine, has been using the bark in capsule form with some of her patients for the past several months. She told me of excellent results with Crohn's disease, ulcers, asthma, and fibromyalgia. Within the last year, I have personally heard of other successes with lupus, lung cancer, prostatitis, and one patient who was able to reverse and overcome Kaposi's sarcoma, a rare form of skin cancer associated with AIDS.

Over the last year I, my wife, children, friends, and associates have found the herb to be effective at knocking out the flu, clearing up sinus, ear, and upper respiratory infections, canker sores, lower back pain associated with arthritis, and eliminating the tired, sore muscles associated with heavy physical work and exercise. I was even able to clear up a case of athlete's foot by putting the powdered bark between the infected toes, and my daughter's conjunctivitis by putting drops of the tea in her eyes several times over the course of two days.

Because of my research and first hand experience in using this wondrous and remarkable herb, I have come to believe that cat's claw is an effective natural remedy for many of today's serious health problems.
