

X-RAY / IMAGING / MRI

A Giant in Chiropractic Radiology: Remembering Dr. Lindsay Rowe (1956-2016)

Deborah Pate, DC, DACBR

Lindsay Rowe, DC, MD, DACBR, was a giant in the field of chiropractic radiology who enjoyed careers as a chiropractor, medical doctor, radiologist and educator. A distinguished international lecturer and author, he wrote more than 50 scientific papers and numerous book chapters; and together with Dr. Terry Yochum, co-authored the internationally respected text *Essentials of Skeletal Radiology*, now in its third edition. It is the standard text in most chiropractic colleges and has been enthusiastically reviewed in scientific journals such as *The New England Journal of Medicine* and *Radiology*.

Dr. Rowe earned his chiropractic degree (MAppSc - Chiropractic) with honors from the Royal Melbourne Institute of Technology in Melbourne, Australia. He subsequently practiced chiropractic and later earned board certification in chiropractic radiology at a time when few chiropractors entered into the specialty. He chaired the Department of Radiology at Canadian Memorial Chiropractic College in Toronto, Ontario. Later, he held the same position at Northwestern College of Chiropractic in Minneapolis, Minn.

Dr. Rowe received a medical degree from the University of Newcastle, Australia, followed by residencies in emergency medicine and diagnostic and interventional radiology at the same institution.

He was associate professor at the University of Newcastle, an adjunct professor at Northwestern Health Sciences University and Murdoch University, staff radiologist at the Center for Diagnostic Imaging (a national medical imaging network) and John Hunter Hospital in Melbourne. He was also a prolific presenter at professional meetings in Australia and many countries around the world.

Dr. Rowe's accomplishments in skeletal radiology have contributed much to the advancement of chiropractic's acceptance in the medical community, especially chiropractic radiology. He was a leader and a trailblazer, bridging the gap between allopathic and chiropractic; creating respect for our profession within the modern health care community.
